

The Smart Locker

The smarter way to
secure personal items
within airports

The Smart Locker is a digitally enabled locker storage system, designed to give travellers peace of mind to move freely through the airport, while their belongings remain safe and secure.

Rental function

Pop/push to open door function

Every smart Locker bank comes with an integrated Terminal to access, allocate and release any locker

24/7 support service

Book lockers in advance

Every bottom locker has been designed to be a pull out drawer for ease of access and accessibility to every user and individual

- Passengers are saved from worry about leaving their belongings unprotected as they go about their day and your staff can spend minimal time on locker management.
- Save time and money on lost and replacement keys.
- With a smart locker management system for personal belongings and/or luggage, passengers can safely store their items for a specified amount of time.

Integrated contactless card payment for seamless transactions

Full length lockers accommodate coats, dresses and suits

Door cupboards with hanging space and storage

Power integration for coffee machines or other electrical devices and motion detecting light as standard

Seating

Integrated upholstered seating with optional power creates a cosy nook where users can make a call or tie their shoelaces.

Light and USB Charging

Every Smart locker comes with an integrated light, USB-A and USB-C charger to provide an enhanced experience when protecting your mobile and personal items.

Accessibility

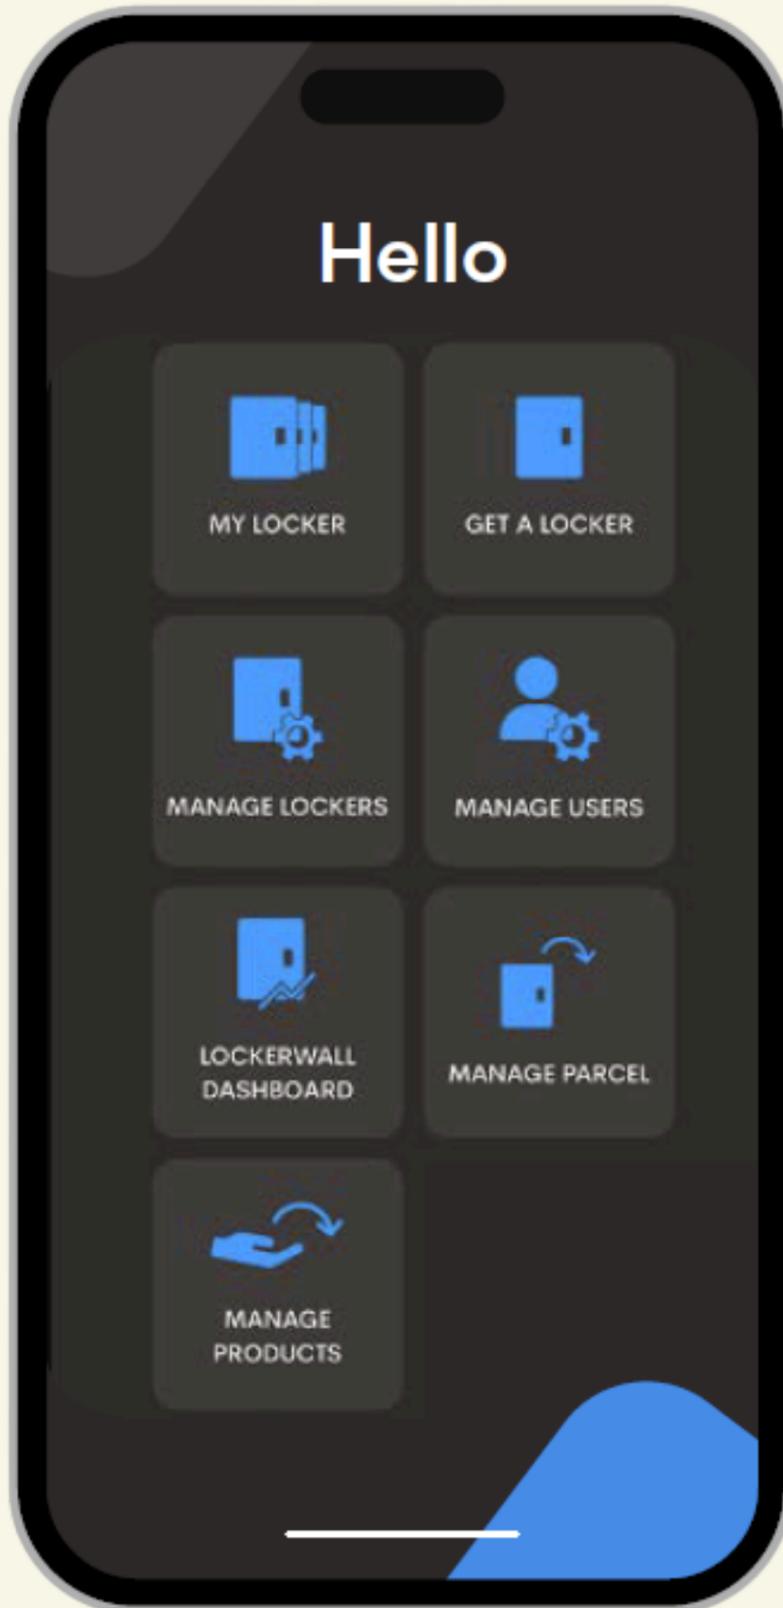

Every bottom Locker comes as a convenient drawer to enhance accessibility for all users.

Mobile App

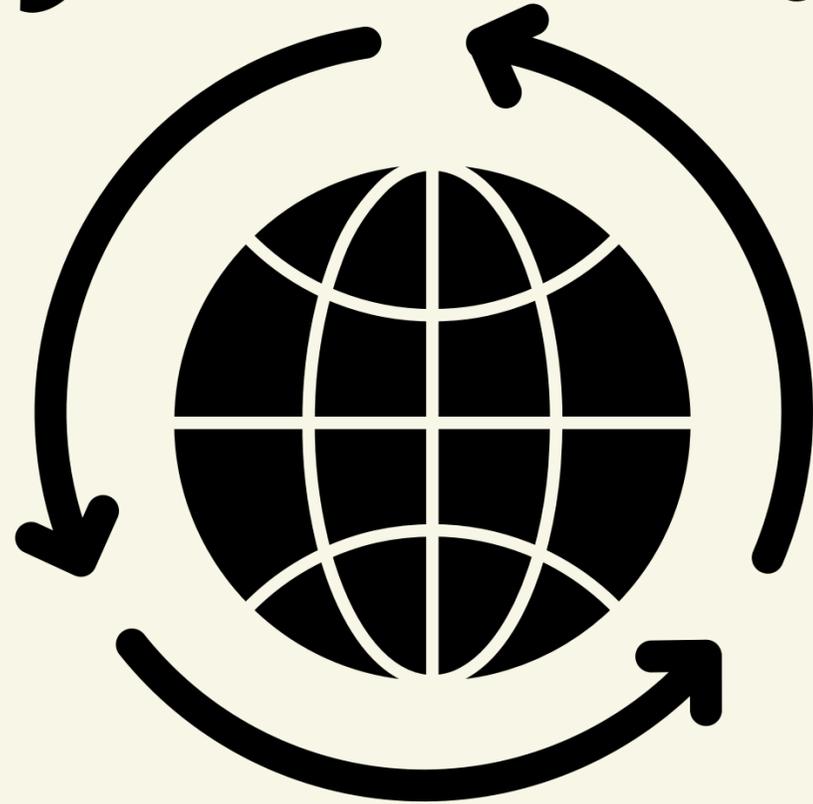

Administration Interface

Smartphones play an essential role in modern travel, making them a natural interface for accessing and managing lockers. The Keynius app enables users to open and use lockers quickly and intuitively, while also providing administrators with advanced tools to monitor, manage, and optimise locker operations.

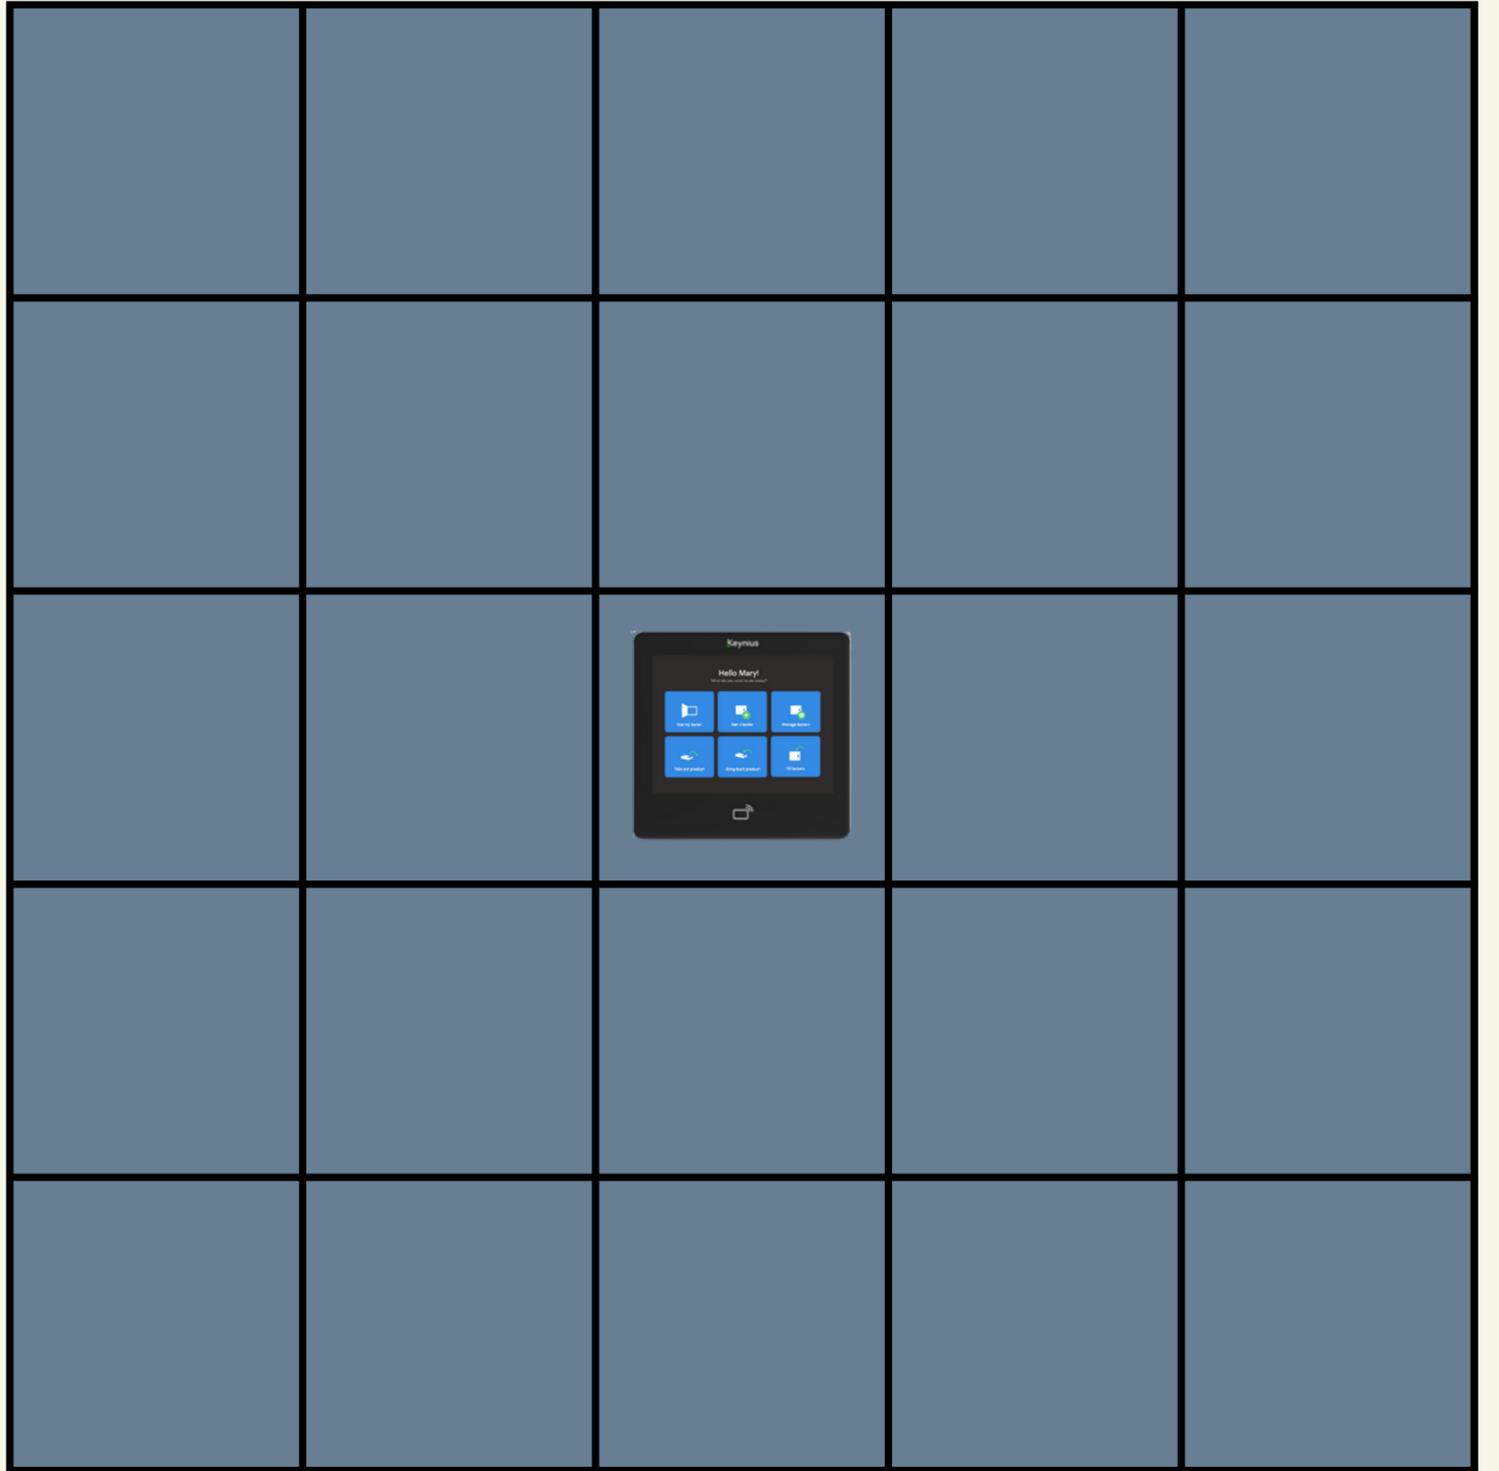

User Interface

Sustainability

- The Smart Locker is built with FSC-certified, recycled materials and a waste-conscious manufacturing process.
- Our modular design and quick-clip panel system ensure effortless updates, adapting to changing tastes and needs.
- It's called future-proofing - and The Smart Locker is the only choice for long-term customization and lasting usability.

Specification

- **Fully customisable configuration**
Smart Locker systems can be tailored to suit your space, layout, and operational requirements.
- **Integrated seating options**
Upholstered seating can be incorporated to create a comfortable nook for making calls, organising belongings, or taking a moment to pause, with optional power integration.
- **Smart and non-smart storage combinations**
Digital Smart Lockers can be seamlessly combined with non-smart locker units to support a range of storage needs.
- **Open storage and shelving**
Integrated open shelving provides quick, convenient access to shared or communal items.
- **Designed for flexibility in airport environments**
Modular elements allow the system to adapt to different terminal layouts, lounges, and passenger flows.

**Apres Aviation, providers of the Smart
Locker to airports around the globe**
